	Scripted, fast (rigid cartel vs competitors, E2)	Scripted, slow (rigid cartel vs competitors, E2)	Cost-mimicking policy vs its higher-cost twin	Q-learning (collusive vs myopic learners)
B0 price level	**AUC 0.99** FPR 0.04	**AUC 0.98** FPR 0.03	**AUC 0.50** exactly identical paths	**AUC 0.97** FPR 0.03
D implied-cost stability	**AUC 1.00** FPR 0.05	**AUC 0.85** **FPR 1.00 (> 0.10)**	**AUC 0.50** exactly identical paths	**AUC 0.39** FPR 0.10
Belal identified-set coverage	**AUC 1.00** FPR 0.05	**AUC 0.93** **FPR 1.00 (> 0.10)**	**AUC 0.50** exactly identical paths	**AUC 0.27** FPR 0.05
Variance screen (CV)	**AUC 0.41** FPR 0.06	**AUC 0.62** FPR 0.01	**AUC 0.50** exactly identical paths	**AUC 0.38** FPR 0.07
Adjustment-robust test (ours)	**AUC 0.79** FPR 0.05	**AUC 0.98** FPR 0.05	**AUC 0.50** exactly identical paths	**AUC 0.66** **FPR 0.13 (> 0.10)**
Probe, before/after	**AUC 0.67** FPR 0.03	**AUC 0.50** **FPR 0.21 (> 0.10)**	**AUC 0.50** exactly identical paths	**AUC 0.93** FPR 0.09
Probe, counterfactual	**AUC 0.99** **FPR 0.11 (> 0.10)**	**AUC 0.97** **FPR 0.88 (> 0.10)**	**AUC 0.50** exactly identical paths	**AUC 0.91** FPR 0.05

Cell colour: AUC (blue = separates, grey = chance 0.5, red = reversed).
FPR = share of honest markets flagged at the frozen threshold (nominal 0.05); bold = above 0.10.
Scripted columns: thresholds from the fast-competitor calibration split, so the slow column tests transfer to slower honest firms. Q-learning column: thresholds from an independent set of myopic learners.
